## Rohana parisatis pseudosiamensis

Male upperside

Male underside

### Nguyen-Phung 1985 - The Siamese Black Prince

Koh Samui only.

This species shows extreme sexual dimorphism. The male upperside is without any markings except for a tiny white apical spot. It is not uncommon at forest edges and glades.

### Flight Period

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
x	x	x	x	x	x	x	x	x	x	x	x

### Wingspan

50 - 53mm

### Early Stages

Only partially known. More detailed life history information is available from the following resources: S. Igarishi - Life Histories of Asian Butterflies, Volume.2 , Page 511

### Larval Foodplant

*Impatiens violaefflora* (Balsaminaceae). Outside Thailand, it has been recorded feeding on various *Celtis* species(Ulmaceae)

### Range

Thailand and Malay Peninsular. Other subspecies from Sri Lanka and India to China and Sundaland, including Palawan.

Female upperside

Female underside
