## Rachana jalindra burbona

[<< Back to Lycaenidae overview](#)

### Hewitson 1878 - Banded Royal

A beautiful and uncommon species normally found around the edges of woodland.

Although there are a couple of other species with very similar underside colouration, these have not yet been found on the Islands, making this species unmistakable.

### Flight Period

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
	x	x			x	x			x		

### Wingspan

30 - 35mm

### Early Stages

Only partially known.

### Larval Foodplant

*Loranthus parasiticus* (Loranthaceae)

### Range

Peninsular Thailand, Malaysia and Singapore. Another subspecies can be found from Northern Thailand, to Nepal.
