## Abisara saturata maya

Male Underside

Female Underside

### Bennett 1950 - Forest Judy

A rare species, which, despite its name can also be found in secondary vegetation, though never far away from woodland.

### Flight Period

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
		x		x	x			x	x		

### Wingspan

35 - 45mm

### Early Stages

More detailed life history information is available from the following resource: [ButterflyCircle Blog](#) (courtesy of Dr. Horace Tan.). Please note that this is a different subspecies, though the details remain the same.

### Larval Foodplant

The local subspecies in Singapore has been bred on *Ardinia elliptica* and *Embelia ribes* (both Myrsinaceae)

### Range

Southern Myanmar and Peninsular Thailand. Other subspecies to be found in the deep part of peninsular Thailand (Yala area), Malaysia, Singapore, Northern Thailand and Vietnam, India, South China, Sumatra, Java, Borneo and Mindanao (Philippines).
