Ypthima singorensis singorensis

Aoki & Uehara 1984 - The Singor Fivering

Koh Samui only.

Another member of the complicated '*baldus* complex'. It was described in 1984, using a female found on Samui on 19 January 1975 as a paratype. There have been no records since then, but this may, however, be due to its similarity to the other members of the complex found on the Island.

Flight Period

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

Wingspan

30 - 40mm.
