## Cirrochroa emlea emlea

Male Upperside

Female Upperside

### Guerin-Menevill 1843- The Malay Yeoman

Koh Samui only.

This species was first found on Samui on 15 January 2013, although it is common on the mainland. It can be found around the edges of woodland.

This species is known for its migratory tendencies, though it is doubtful that this is the cause for its sudden appearance on the Island. It is possible that it may have been overlooked owing to its similarity to the very common *C. tyche*.

### Flight Period

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
x											

### Wingspan

55 - 65mm.

### Early Stages

Not known.

### Larval Foodplant

Not known.

### Range

Peninsular Thailand and the Malay Peninsular. Other [subspecies](#) found throughout Sundaland with the exception of Palawan.
