Arhopala silhetensis adorea

Male upperside

Female upperside

de Niceville 1890 - Sylhet Oakblue

A large species of forests and forest clearings.

The subspecies is only provisional, at the moment, as all specimens from the Island show extreme differences from both *A. s. adorea*, and the more northern nominate subspecies, *A. s. silhetensis*. All markings are extremely dark, particularly in the submarginal and post-discal areas. Investigations are currently in force to see whether it can be described as a new subspecies.

Flight Period

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
x	x	x	x	x	x	x	x		x		x

Wingspan

38 - 48mm

Early Stages

Known. More detailed life history information is available from the following resource: [ButterflyCircle Blog](#) (courtesy of Dr. Horace Tan.)

Larval Foodplant

Currently unidentified.

Range

A. s. adorea is found in Peninsular Thailand, Malaysia and Sumatra. *A. s. silhetensis* is found in Assam, Myanmar and Northern Thailand.
